

VIERSEN, A.P. VAN, PRESCHER, H. & SAVELSBERGH, J, 2009. Description of two new trilobites from the Ahrdorf Formation (Middle Devonian) at the "Trilobitenfelder" of Gees, Eifel, Rhenish Mountains. *Bulletin de l'Institut royal des Sciences naturelles de Belgique, Sciences de la Terre*, 79: 43-53.

Two trilobites, *Pedinopariops hoelleri* n. sp. (Phacopidae) and *Tropidocoryphe bassei* n. sp. (Proetidae), are recorded from middle Eifelian strata at the "Trilobitenfelder" near the village of Gees, Germany. Lithology of the Gees Subformation (Ahrdorf Formation) at Gees is briefly elucidated. The holotype of *Tropidocoryphe barroisi* (MAILLIEUX) from Belgium is presumed lost and the species is restricted to poor quality casts of the holotype. *Tropidocoryphe* specimens from Gees formerly ascribed to *T. barroisi* are reassigned to *T. bassei* n. sp.
